TOPIC 4: PATTERNS AND SEQUENCES

LESSON 1:

SUB TOPIC: DIVISIBILITY TESTS

CONTENT: Divisibility tests of 2, 3, 4 and 5.

Divisibility for 2.

A Number is divisible by 2 if the digit in the one's place is 0, 2, 4, 6, or 8 eg 1460

Test for 3:

A number is divisible by 3 if the sum of its digits is divisible by 3 eg 741 = 7 + 4 + 1 = 12

Test for 4:

A number is divisible by 4 if the number formed by its last two digits is divisible by 4. eg 572. The last two digits are 7 and 2 therefore the number formed is 72 which is divisible by 4. Hence 572 is divisible by 4.

Test for five (5):

A number is divisible by 5 if the last digit in the ones place is either 0 or 5. eg 360 or 805.

EVALUATION ACTIVITY:

LESSON 2:

SUB TOPIC: DIVISIBILITY TESTS

CONTENT: Divisibility tests for numbers 6 to 10.

Test for 6:

A number is divisible by 6 if it is divisible by 2 and 3. In other words a number is divisible by 6 if it is even and the sum of its digits is divisible by 3.

Example:

618 is divisible by 6 since it is an even number and the sum of its digits 6 + 1 + 8 = 15 is divisible by 3.

738 is divisible by 6 since it is an even number and the sum of its digits 7 + 3 + 8 = 18 is divisible by 3. Therefore 738 is divisible by 6.

Test for 7:

When the last digit of a number is doubled and the result is subtracted from the number formed by the remaining digits, the outcome is divisible by 7.

Example: Take the number 861. the last digit is 1 and the number formed by the remaining digits is 86, double 1 to give (1+1)=2

Subtract 2 from 86 to give (86 - 2) = 84

84 is divisible by 7. Hence 861 is also divisible by 7.

Test for 8:

A number is divisible by 8 if the number formed by the last three digits is divisible by 8. Example:

In the number 7960,760 is number formed by the last three digits. It is divisible by 8 therefore 7960 is divisible by 8.

Test for 9:

A numbers is divisible by 9 if the sum of its digits is divisible by 9.

Example: 198 the sum of 198 is 1+9+8 = 18

18 is divisible by 9 therefore 198 is divisible by 9.

Test for 10:

A number is divisible by 10 if the digit in the ones place is 0 eg 70, 60, 120, 3010.

A number which is divisible by 10 is also divisible by 2 and 5.

Test for 11:

A number is divisble by 11 if the difference between the sum of the digits in even places and the sum of the digits in the odd place is zero (0) or divisible by 11.

eg Even position:

Odd position

Sum of the numbers in odd positions = 7 + 3 + 8 = 18Sum of the numbers in even positions = 7 + 3 + 0 = 10

Difference between sums = 21 - 10 = 11

Since difference is divisible by 11

:. the number 676390 is divisible by 11.

CONTENT: Examples:

1. The cost price of a 50kg bag of sugar is shs 45,000. At what price must he sell each kilogram in order to make a profit of 20%.

Cost price for 50kg = 45,000 Cost price for 1kg = 45,000 Selling price for 1kg

50 st price for Tkg = 45,000

120 x 900

%age profit = 900= (120 x 9) Selling price as percentage = 100 + 20% 1080=

= 120

SUB TOPIC: DISCOUNT

CONTENT: Meaning of discount

Finding discount

Example:

1. The market price of a shirt was shs 1500. After a discount, a customer paid shs 1200. How much was the discount?

Discount = Marked price – cash price = 1500= - 1200= = 300=

Express the discount as a percentage Percentage discount = discount x 100%

Marked price 1 20 = 300 x 100% 1500 5 1 = 20%

2. The marked price of a bicycle is shs 60,000. A customer is offered a discount of 15%

How much money does the customer pay?

Discount = 15% of marked price Amount paid = 100% - 15% = 95% = 15 x 60,000 = 95% of 60,000 100 95 x 60,000

100 95 x 60,000 = 9000= 100 Amount paid = 60,000= = 85 x 600= = -9,000 = 51,000=

SUB TOPIC: FINDING ORIGINAL PRICE WHEN GIVEN PERCENTAGE DISCOUNT

CONTENT: Example:

marked price.

Solution:

Cost price as %age = 100% Discount offered = 10%

Let the marked price be x 90% of x = shs 18.000

Cissy paid = 100% - 10% = 90%

 $90 \times x = shs 18,000$ 100 1

90x $= 18.000 \times 100$

DISCOUNT (%ge DISCOUNT & AMOUNT DISCOUNT)

CONTENT: Example:

Calculate the marked price and selling price.

Solution:

%age discount – 17% 500 x 100 Discount - 8500= 50,000= Marked price = 100% Selling price

100% - 17% But 17% rep 8500 1% rep 8500 = 83#

83 x 50,000 17 100% rep (8500 x 100) 100
